According to EN 14516

Model : Sophia Se Cor. Left
Date : 30/11//2019
Material : Acrylic
Color : White
Dimension : 180X180 cm

Test Conditions :

1- Ambient Temperature Of $23 \pm 5 \text{ C}^\circ$

Procedure :

- Select an area to be tested.
- Use each test area only once for each application. Clean the test area thoroughly with hot soapy water, rinse and wipe dry with a clean dry cloth.
- At each of the test areas deposit a drop of the test solution. Cover the drop with a watch glass concave face downwards.
- The drop size shall be such that it is completely covered by the watch glass. Leave for (120 ± 5) min with the test area protected from sunlight.
- Thoroughly rinse the test areas with de-ionised water and visually check for any adverse change in appearance. If any deterioration is noticed, dip the foam disc in de-ionised water and place it on the surface that was tested. Rotate the cleaning device at a speed of 60 min⁻¹. Clean for 30 revolutions.
- Rinse with de-ionised water, dry and visually re-examine the test areas. If any deterioration persists, repeat the cleaning process using the abrasive comprising 12 h-alumina suspended in water and reexamine.
