8. Documentation technique appropriée et/ou documentation technique spécifique: -

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Thilo Pregartner, Dr.-Ing.  
Tumlingen, 2019-12-09

Peter Schillinger, Dipl.-Ing.

Cette DoP a été préparée en plusieurs langues. En cas de différend relatif à l'interprétation, la version anglaise prévaudra.

L'annexe comprend des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées de manière neutre).

## Specific Part

### 1 Technical description of the product

The fischer Injection system FIS HT II for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar FIS HT II, FIS HT II High Speed or FIS HT II Low Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values for resistance	See Annexes C 1 to C 35
Displacements	See Annex C 36
Durability	See Annex B2

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

#### 3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

### 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

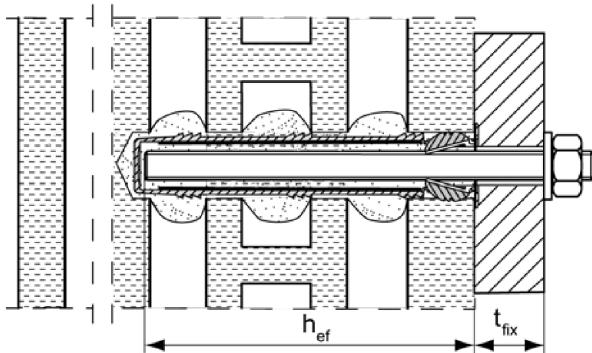

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

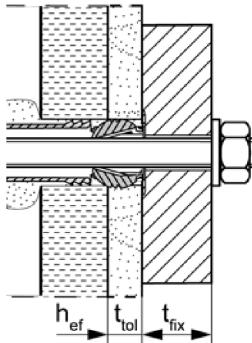

## Installation conditions part 1

**Anchor rods with perforated sleeve FIS H K; Installation in perforated and solid brick masonry**

**Pre-positioned anchorage:**

Installation with render bridge

**Size of the perforated sleeve:**

FIS H 12x50 K

FIS H 12x85 K

FIS H 16x85 K

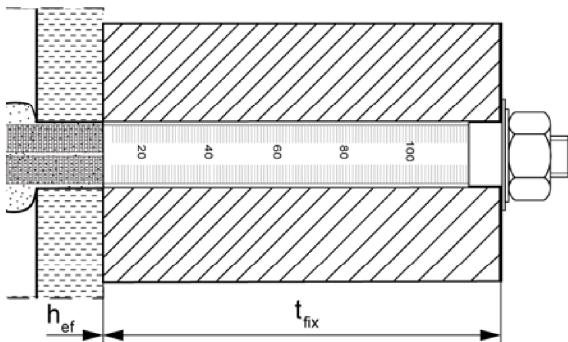

FIS H 16x130 K

FIS H 20x85 K

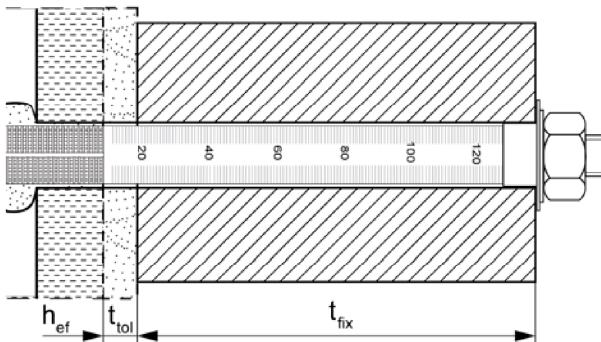

FIS H 20x130 K

FIS H 20x200 K

**Push through anchorage:**

Installation with render bridge

**Size of the perforated sleeve:**

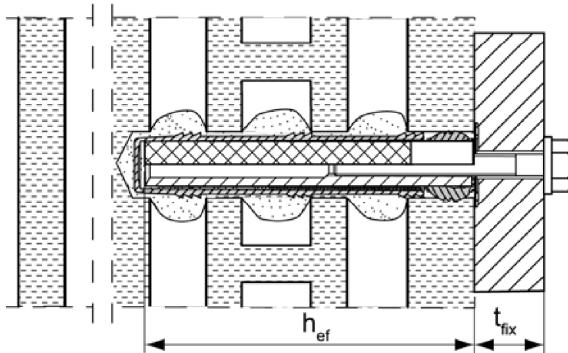

FIS H 18x130/200 K

FIS H 22x130/200 K

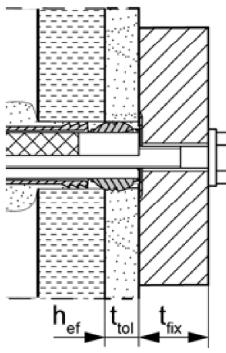

**Internal threaded anchor FIS E with perforated sleeve FIS H K;**

**Installation in perforated and solid brick masonry**

**Pre-positioned anchorage:**

Installation with render bridge

fischer injektion system FIS HT II masonry			<b>Annex B 1</b> Appendix 7/ 55
Intended Use Specifications (part 1)			

## Specifications of intended use (part 2)

### Anchors subject to:

- Static and quasi-static loads

### Base materials:

- Solid brick masonry (masonry group b), acc. to Annex B 13
- Hollow brick masonry (masonry group c), according to Annex B 13
- For minimum thickness of masonry member is  $h_{ef}+30\text{mm}$
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry, the characteristic resistance of the anchor may be determined by job site tests according to Technical Report TR 053, April 2016, Annex C under consideration of the  $\beta$ -factor according to Annex C 36, Table C36.1

Note (only applies to solid bricks):

The characteristic resistance is also valid for larger brick sizes, higher compressive strength and higher raw density of the masonry unit.

### Temperature Range:

- I: From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)
- II: From -40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)

### Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar)
- Structures subject to dry internal conditions exist  
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist exist  
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

fischer injektion system FIS HT II masonry

Intended Use  
Specifications (part 2)

Annex B 2

Appendix 8/ 55

## Specifications of intended use (part 3)

### Design:

- The anchorages have to be designed in accordance with the Technical Report TR054, April 2016, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,b} = N_{Rk,p}$$

$$V_{Rk} = V_{Rk,b} = V_{Rk,c}$$

For the Calculation of pulling out a brick under tensile load  $N_{Rk,pb}$  or

pushing out a brick under shear load  $V_{Rk,pb}$  see Technical Report TR 054, April 2016.

$N_{Rk,s}$ ,  $V_{Rk,s}$  and  $M_{Rk,s}$  see annex C1-C3

Factors for job site tests and displacements see Annex C36

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

### Installation:

- Condition d/d: - Installation and use in dry structures
- Condition w/w: - Installation and use in dry and wet structures
- Condition w/d: - Installation in wet structures and use in dry structures
- Hole drilling see Annex C (drilling method)
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) see Annex B 6, Table B6.1
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or anchor rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E.
- minimum curing time see Annex B 8, Table B8.2
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A 5, Table 5.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the anchor rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

## Installation instruction part 1

### Installation in solid brick (without perforated sleeve)

1		Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole $h_0$ and drill hole diameter $d_0$ see <b>Tables B4.1; B5.1</b>		
2				Blow out the drill hole twice. Brush twice and blow out twice again.
3		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)		
4		Place the cartridge into a suitable dispenser		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
5		Fill approximately 2/3 of the drill hole with mortar beginning from the bottom of the hole <sup>1)</sup> . Avoid bubbles!		For push through anchorage fill the annular clearance with mortar.
6		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth marking, excess mortar must emerge from the mouth of the drill hole.		
7		Do not touch. Minimum curing time see <b>Table B8.2</b>		Mounting the fixture. $T_{inst,max}$ see parameter of brick.

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

fischer injektion system FIS HT II masonry

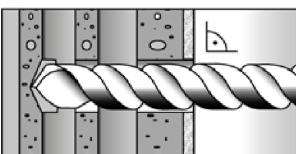

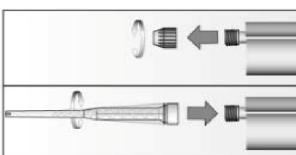

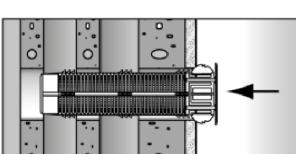

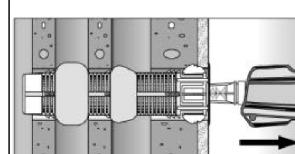

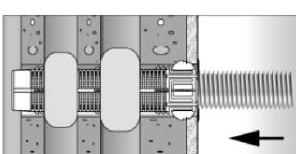

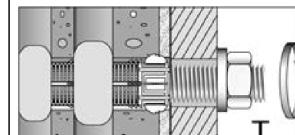

**Intended use**  
Installation instruction (without perforated sleeve) part 1

**Annex B 9**

Appendix 15/ 55

## Installation instruction part 2

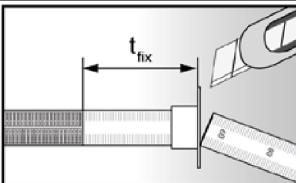

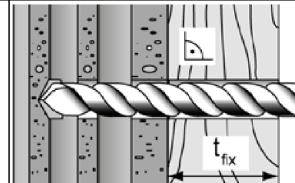

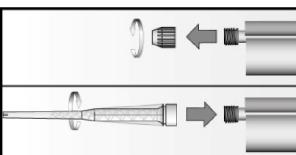

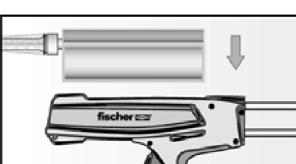

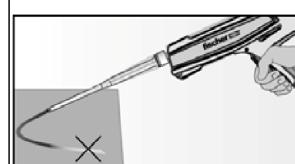

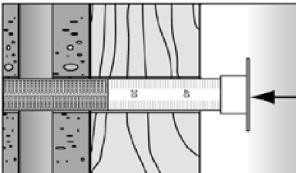

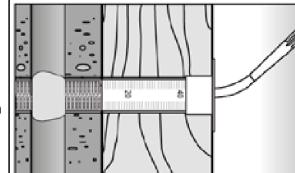

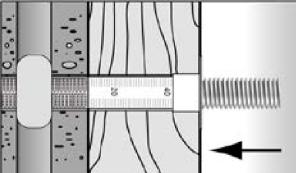

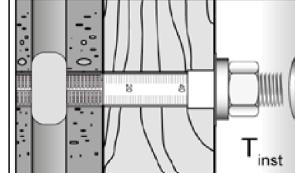

### Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		Drill the hole (drilling method see Annexes C). depth of drill hole $h_0$ and drill hole diameter $d_0$ see <b>Table B6.1</b>	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)	
3		Place the cartridge into a suitable dispenser.	 Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.	 Fill the perforated sleeve completely with mortar beginning from the bottom of the hole <sup>1)</sup> .
5		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).	
6		Do not touch. Minimum curing time see <b>Table B8.2</b>	 Mounting the fixture. $T_{inst,max}$ see parameter of brick.

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

## Installation instruction part 3

Installation in perforated or solid brick with perforated sleeve (push through anchorage)

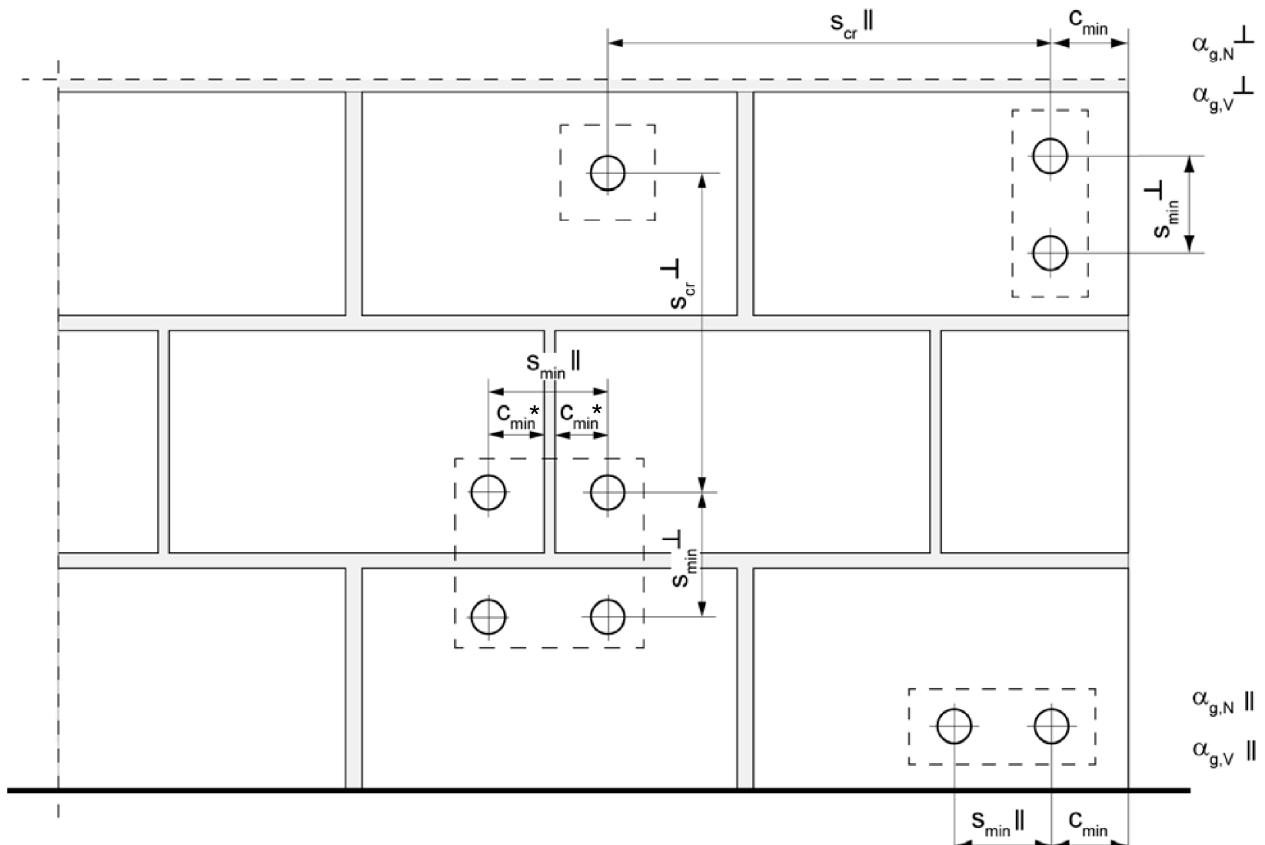

1		Push the movable stop up to the correct thickness of fixture and cut the overlap.		Drill the hole through the fixture. Depth of drill hole ( $h_0 + t_{fix}$ ) and drill hole diameter see <b>Table B7.1</b>
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)		
3		Place the cartridge into a suitable dispenser.		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the fixture into the drill hole.		Fill the sleeve with mortar beginning from the bottom of the hole. <sup>1)</sup> For deep drill holes use an extension tube.
5		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).		
6		Do not touch. Minimum curing time see <b>Table B8.2</b>		Mounting the fixture. $T_{inst,max}$ see parameter of brick.

<sup>1)</sup> Exact volume of mortar see manufacturer's specification.

## Spacing and edge distance

\* Only, if vertical joints are not completely filled with mortar

$s_{min \parallel}$	= Minimum spacing parallel to bed joint
$s_{min \perp}$	= Minimum spacing vertical to bed joint
$s_{cr \parallel}$	= Characteristic spacing parallel to bed joint
$s_{cr \perp}$	= Characteristic spacing vertical to bed joint
$c_{cr} = c_{min}$	= Edge distance
$\alpha_{g,N \parallel}$	= Group factor for tensile load, anchor group parallel to bed joint
$\alpha_{g,v \parallel}$	= Group factor for shear load, anchor group parallel to bed joint
$\alpha_{g,N \perp}$	= Group factor for tensile load, anchor group vertical to bed joint
$\alpha_{g,v \perp}$	= Group factor for shear load, anchor group vertical to bed joint

For  $s \geq s_{cr}$   $\alpha_g = 2$

For  $s_{min} \leq s < s_{cr}$   $\alpha_g$  according to installation parameters of brick

$$N_{Rk}^g = \alpha_{g,N} \cdot N_{Rk}; \quad V_{Rk}^g = \alpha_{g,V} \cdot V_{Rk} \quad (\text{Group of 2 anchors})$$

$$N_{Rk}^g = \alpha_{g,N \parallel} \cdot \alpha_{g,N \perp} \cdot N_{Rk}; \quad V_{Rk}^g = \alpha_{g,V \parallel} \cdot \alpha_{g,V \perp} \cdot V_{Rk} \quad (\text{Group of 4 anchors})$$

## Drilling method

Hammer drilling with hard metal hammer drill

Table C30.2: Group factors

Anchor rod	M8	M10	M10	M12	M12	M16	M16
Perforated sleeve FIS H K	16x130		18x130/200		20x130		22x130/200
Group factors	$\alpha_{g,N \parallel}$ $\alpha_{g,V \parallel}$ $\alpha_{g,N \perp}$ $\alpha_{g,V \perp}$	[ - ]			2		

fischer injektion system FIS HT II masonry

## Performance

Vertical perforated brick HLz, form B, dimensions, installation parameters

## Annex C 30

## Vertical perforated brick HLz, form B, EN 771-1

**Table C31.1:** Characteristic resistance under tensile load

Anchor rod		M8	M10	M10	M12	M12	M16
Perforated sleeve FIS H K		16x130		18x130/200		20x130	22x130/200
<b>Tensile load <math>N_{Rk}</math> [kN] depending on the compressive strength <math>f_b</math> (temperature range 50/80°C)</b>							
compressive strength $f_b$	condition						
4 N/mm <sup>2</sup>	w/w	w/d	0,9			1,2	
	d/d		1,2			1,5	
6 N/mm <sup>2</sup>	w/w	w/d	1,5			2,0	
	d/d		1,5			2,0	
8 N/mm <sup>2</sup>	w/w	w/d	2,0			2,5	
	d/d		2,5			3,0	

Factor for temperature range 72/120°C: 0,83

**Table C31.2:** Characteristic resistance under shear load

Anchor rod		M8	M10	M10	M12	M12	M16
Perforated sleeve FIS H K		16x130		18x130/200		20x130	22x130/200
<b>Shear load <math>V_{Rk}</math> [kN] depending on the compressive strength <math>f_b</math> (temperature range 50/80°C and 72/120°C)</b>							
compressive strength $f_b$	condition						
4 N/mm <sup>2</sup>	w/w	w/d	0,9				
	d/d						
6 N/mm <sup>2</sup>	w/w	w/d	1,5				
	d/d						
8 N/mm <sup>2</sup>	w/w	w/d	2,0				
	d/d						

Factor for job site tests and displacements see annex C36

fischer injektion system FIS HT II masonry

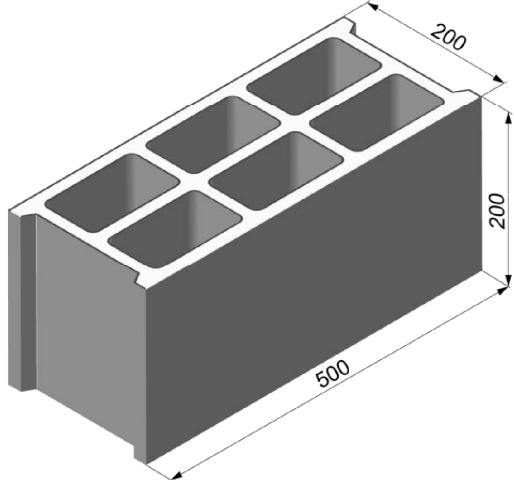

### Performance

Vertical perforated brick HLz, form B,  
Characteristic resistance under tensile and shear load

### Annex C 31

Appendix 50/ 55

# Light-weight concrete hollow block Hbl, EN 771-3

Light-weight concrete hollow block Hbl, EN 771-3		
Producer	e.g. Sepa Papaing	
Nominal dimensions [mm]	length L	width W
	500	200
Density $\rho$ [kg/dm <sup>3</sup> ]	$\geq 1,0$	
Compressive strength $f_b$ [N/mm <sup>2</sup> ]	2 / 4 / 6	
Standard or annex	EN 771-1
