Concerning DOP N° S68325-0005-ADEO-19 - **EN 15651-3:2012: Type S: CLASSE S1**

We have had our silicones successfully tested to ISO 10590, as this is in our opinion a more severe test than ISO 10591.

In ISO 10590 the sealant is tested at 60% maintained elongation during 24 hours and the requirement is no loss of adhesion or cracking of the sealant.

In ISO 10591 the sealant is elongated and it is allowed to break as soon as it passes 25% elongation. This value will be achieved by every silicone produced by Soudal provided it adheres well to the substrate.

Feel free to contact us if you have any more requirements,

Many Thanks,

Werner Dierckx

Senior Technical Product Manager
