Hello Kimi,

I agree with you. It seems that no instruction manuals will be required for these quality models.  
I made the modifications.

Thanks!

Dear CLEMENT,

As you know we are doing the compliance catch back project.

For the following quality model, instruction manual actions are required by QMS master plan.

But from my experience and checking with some suppliers these quality models don't have instruction manuals.

Screwdriver
Screwdriver bit holder and screwdriver bit sets
Screwdriver set
Spanners and wrenches (per unit)
Adjustable wrench, Stillson pipe wrench, plumber's wrench or Stillson
Carpenters pincers
Cutting pliers
Hammer

Magnetic arm, mirror, clip
Needlenose pliers
Rubber mallet
Tools and socket set
Wire stripper

Could you help to check if these quality models really require an instruction manual?  
If not, could you kindly delete the instruction manual in the QMS master plan?

Thanks.
